- Reduce maintenance costs and improve efficiency by eliminating traditional fax machines from your business
- Windows based operating system
- Desktop server faxing and emailing
- Least cost routing technology
- Multiple lines in a single unit
- Non-stop operation
- Latest Fax-card technology

iMPS2 Lite Overview:

The iMPS2 Lite has been designed as a direct upgrade to the iMPS1, and represents a new generation of fax technology.

With the iMPS2 Lite you can reduce the cost per line of iSeries faxing to a level where users do not have to think about the number of lines they can afford, only what they need. You can also combine the power of Fax and Email technology with the ability to upgrade to a full iMPS2 Enterprise Fax Solution when ready.

Line-of-Business applications can be easily enabled without any programming, by using the unique non-programming spool file API for the volume sending of transactions via fax or email.

Documents can be portrait, landscape or legal size. They can include an electronic form or overlay generated either by iMPS2 Lite itself, or from one of the many Forms products available on the market.

Pre-timed transmissions and batching of numbers for out-of-hours sending with automatic dialling, retries and logging are all maintained automatically. Automation of routine faxing of purchase orders and customer statements etc. on a weekly, monthly or on-demand basis.

Security and confidentiality are assured by the iMPS2 Lite's built-in hierarchy of users within department, within division, within company. All dialling, retries, batching and purging are an integral part of the application. Comprehensive Cost Analysis can also be produced across the systems hierarchy.

“The International Presence Group has now been providing high-volume fax and messaging solutions to businesses around the world for over 23 years”
